ACKNOWLEDGEMENTS

I would like to take this moment to state my sincerest gratitude to Dr. Simon M. Zaby as an advisor, for his advisories and support in financial academic.

I would also like to thank Asst. Prof. Dr. Piyapas Tharavanij and Mr. Thanachai Phoopatana as instructor for enhancing in the basic knowledge and understanding about financial academic from the fundamental until recently. Furthermore, to all of my professors at CMMU for encouraging in academic and how to be professional in business world. This thematic paper cannot be completed academic paper without those supports from lecturers.

I would like to be thankful Mr. Voratach Atasukwatana, Ms. Chittaporn Chittapraphai and Mr. Kritsakorn Eadhongsai as my friend, for his support in financial academic and how to be professional in career.

Finally, I would like to thank all my friends at CMMU, especially in major finance students who support and encourage me all the time and share a lot of knowledge until I finished my master degree.

RELATIVE VALUATION OF ANANDA DEVELOPMENT PUBLIC CO. LTD.

VEERAVITCH SONGSAMPHANT 6049056

M.M. (FINANCIAL MANAGEMENT)

THEMATIC PAPER ADVISORY COMMITTEE: SIMON M. ZABY, Ph.D., ASSOC. PROF. TATRE JANTARAKOLICA, Ph.D., ASST. PROF. PIYAPAS THARAVANIJ, Ph.D.

ABSTRACT

This thematic paper demonstrated how to value the stock price of The Ananda development public company limited (ANAN) which applied the value of firm from industry peers and try to estimate future free cash flow to assess the firm worth. In the relative valuation method, I applied multiple, average, ratio of firm with benchmark factor to evaluate the firm's value. The benchmark is selected in range of industry average.

As a result, the target price of ANAN from relative valuation method is 6.01 THB, comparing with closed price at 3.98 THB as of 5 December 2018, therefore I recommend BUY.

KEY WORDS: ANAN / Valuation / Relative Valuation / Condominium

CHAPTER I

VALUATION

1.1 Highlights

The recommendation for ANAN share after valuation is indicative to BUY with the 1-year target price at 6.01 THB per share by using Relative Valuation method which offers 51.1% upside if comparing with closed price at 3.98 THB as of 5 December 2018.

Moreover, the business continuously grows by strategic of joint venture with foreign investor. The net profit that Ananda could generate in quarter 3, 2018 is equal to 976 million THB in which has profit-sharing from joint venture project around 982 million THB. Comparing with net profit from quarter 2, 2018 is only around 584 million THB on QoQ growth 67%. Accumulate net profit in 9 months is 1,705 million baht comparing with same period in previous year has 204% YoY growth. Due to Ananda starting transfer 3 mega-projects of condominiums as Ashton Asoke (6.7 billion THB), Ashton Chula-Silom (8.6 billion THB) and Ideo Sukhumvit 93 (6.4 billion THB).

The revenue structure of Ananda come from two parts with the main revenue from project sales in each year and also the secondary revenue in project management and service which maintain the same as year 2017.

From project information of Ananda's announcement, the estimation in 2019, the total revenue between 2018 and 2019 will growth by 24.3%. Especially, Ananda will recognize revenue from JV project in 2019 to be around 2.06 billion THB which has been growth by 73.3% from estimation in 2018 to be around 1.2 billion THB. The revenue of project JV in 2019 will be considered as Ideo Q Victory, Ideo Q Suhumvit 36, Ideo New Rama-, Elio Del Nest, Ideo Mobi Rangnam, Elio Del Moss, and Ideo Sathorn-Wongwian Yai.

1.2 Business Description

Ananda is a developer of condominium projects and housing projects in Bangkok and its vicinities. The Company is one of market leader in developer of real estate projects in Bangkok. The developed condominium projects under the name of “Ashton”, “IDEO”, “Venus” and “Ellio”, which are modern style and focus on the modern lifestyle.

Ananda catches up customers who have “urban life” for residents in Bangkok with creating a strong brand and become successful in the real estate market in Bangkok and its vicinity.

The company focuses on cutting-edge design and to be attracted for the “Gen C” who focuses on “convenience”, able to control “cost and time” and “comfortably life “with money wisely use.

Mr. Chanond Ruangkritiya, the president of Ananda Development Public Company Limited (ANAN) from 2001 until now. In the past, the different of Ananda from other competitors is financial structure which is mostly use the leverage by equity part. The product of Ananda mostly focuses on mid-to upscale segment.

In 1999, Ruangkritiya's family was established Ananda Development Public Company Limited (ANAN). The core business of Ananda is all aspect about residential developer in real estate industry and providing the management service for real estate, especially, the condominium development project which mostly located around the mass transit stations (close to the station of BTS, MRT, Airport link etc.) in metropolis and peripheral areas. It can be called that in term of condominium around mass railway transit network, Ananda is the market leader. In additional to core business, the urban living product as residential housing which located in reachable city center area. Moreover, the subsidiaries and affiliated projects of Ananda are Bira International Circuit (the race track in Chonburi), Bira-kart company limited (the Go-kart race track in Samutprakarn) and the sports club and restaurant named Bluedeck company limited.

In 2007, Ananda has jointed venture with Primerica Financial for raising fund to launch the first project at Ladproad district in Bangkok named "Ideo ladproad 17" and continually further invest in condominium projects. Without funding limit, in 2010 Ananda became the highest in revenue sale and ended joint venture with Primerica Financial.

In 2012, Ananda decided to issue IPO amount of 1,333,000,000 shared to gain capital around 5.6 billion THB which could improve healthy statement for Ananda.

Ananda's target customer called "Gen C" which are anyone who is looking for the condominium with the modern lifestyle, casual and hustle life. So, the products will consist of varieties of brand which is divided into Hi-end, middle range until economy market segmentation as the following groups of customers.

Luxury	ASHTON
High-end	
Up-scale	
Mid-range	
Low-range	ELIO
Super value-range	UNIO

Figure 1.1 ANANDA brand product

Source: ANAN

The company has developed and launched a condominium project under the name “UNO”, which is an 8-storey condominium in 2017. The selling price would offer less than 1 million baht per unit for target “Super Value” customer segment.

Ananda provides the residents in the city and aims to set up the philosophy as LIVE/WORK/PLAY with mass transit railway connecting. Therefore, most of Ananda condominium placed near the railway stations.

1.2.1 SWOT Analysis

1.2.1.1 Strengths

- Reputation of brand: Ananda developer, known as Ideo and Ashton brand.
- Location: Placed reachable distance along rail way network by walking.
- Partner: Over past 10 years, Ananda has not only JV and IPO, but also having M&A which formed financial structure by heavy equity part.
- Strong brand image: With image as urban living with hassle life style.
- Innovation: with set up Innovation to be new strategy, Ananda aim to integrate technology with lifestyle for more convenience of urban live.

- Segment product: variety of products segmentation.
- After sale service: one of Ananda's subsidiary is community management and juristic person service entity offering.
- Manufacturing consistency: Deeping into supplier, Ananda has their own construction company, property agency and other with developing projection plan in future
- On time production: Ananda can finish the accommodation and ready to transfer to customer on hand in an agreement term.

1.2.1.2 Weaknesses

- Consumer confidential: After unappreciated of Aston condominium about transferable to customer which affect to reputation of Ananda.
- Higher price: due to land prices tend to be higher and rarely free placement, especially in city center. As a result, the cost of project development is high and lead to further costly for location around public railway station. Therefore, Ananda's concept with reachable location along sky train will set up higher price than competitor
- Limitation of budgeting: capital structure of Ananda mostly equity financing, but it can gain more budgeting by loan.

1.2.1.3 Opportunities

- Modern life style: with urbanization push condition of living trend to be smaller household size and more being single-living or childless family
- Government policy of buying first property which subsidize for buying low range or economy range property product.
- Number of Population and migrant increasing: would cause of higher density in downtown.
- The extension of train line: according to Ananda's concept of location settlement
- Heavy traffic congestion: Due to more spending time on traffic, people tends to buy living place which convenience of transportation.
- Aging society: There are some survey found that the housing market for the elderly in Thailand over past 5 years is likely to grow significantly. The

developer has opportunity to provide accommodation for increasing number of retirement clients.

1.2.1.4 Threats

- Politic instability: Construction business is risky from political and overall economic situation at the current time that cannot be avoidable
- Even, developers continue to grow in Bangkok and its vicinities but they have to face with intense competition with pricing, greater number of competitor and limited free area in metropolis

1.3 Macro-Economic Analysis

1.3.1 Positive Factor

1.3.1.1 Mass transit expansion

In last 4 years, the mega-project investment in fundamentals of public transport will create reliance of public and will dynamic to further investment in private sector especially in property development industry.

After 1999, the sky train was served for public to solve the traffic congestion in metropolis and Private sector would gain the positive side-effect as well as Ananda have had. Nowadays, there are opening the new extension 5 sky train lines and with effort of government to develop the ultimate phase of mass transit railway in coming soon which are majority factor to support the Ananda's projects located along the BTS line, as well as the projects near the new retail space in the outer area.

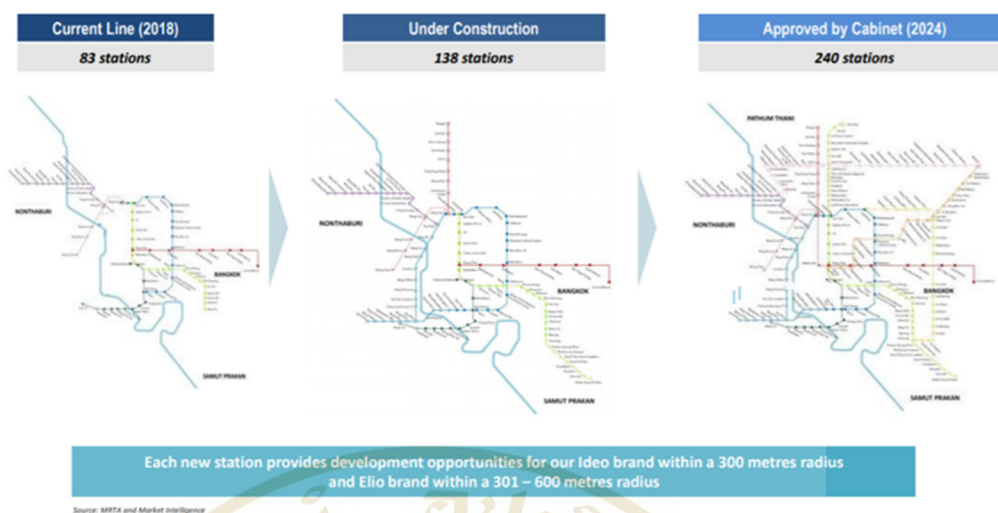

Figure 1.2 Thailand's Mass Transit Infrastructure Rollout

Source: MRTA

1.3.1.2 Thai economic trend seems to be recovery after political crisis.

There was political crisis in Thailand in 2014 which affected to all aspect in Thai economic. Thai's GDP grew up on average 3.73% from 1984 until quarter 2 of 2018. The GDP in 2nd quarter grew by 4.6% (yoy) and the first half of the year grew up 4.8% when compared with 3.7% in 2017 and 3.15% in 2016 (Graph1). The investment of private sector increased 4.9% in Q1 as a consequence from investment of state enterprise sector 8.9% and private sector 3.2% which consist of construction sector increased around 2.8%. The sale in property development industry grew 3.5% between 2016 and 2017 and 4.63% between 2015 and 2016. Ananda has worked in process project around 17,250 units by 26 projects for condominium and housing is around 770 units by 8 projects in 2018.

Figure 1.3 Real GDP Growth annual growth rate in Thailand

Source: Office of National Economic and Social Development Board

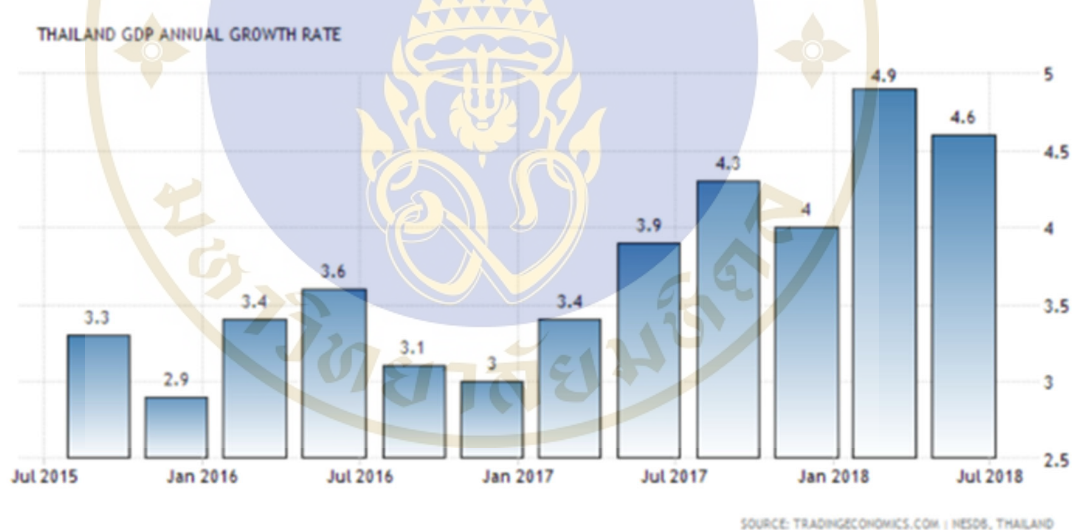

Figure 1.4 GDP annual growth rate in Thailand

Source: Tradingeconomics (NESDB)

1.3.1.3 The world-wide connecting and population increasing.

As result of advance in transportation, technology and communication, there are higher number of population and migrant which is continually increasing. The first reason, Thai population amounts continually increase with average growth 0.5% from 65.12 million in 2014 to 66.19 million in 2017.

The number of urban households in Bangkok is growing from 10.5 million in 2012 to 12.7 million in 2017 and consistent with the higher number of Apartment household from 1.6million to 2 million between 2012 and 2017. These numbers (figures) can imply that due to the more population in Bangkok, the greater number of high living households.

Not only Thai population will increase, but the expatriate amount will increase as well. Focusing on collected number, foreigner workers in Thailand who has purchasing power, raised from 1.5 million in 2014 to 1.7 million in 2016 (Table1). To support this number of foreigners to be target group, there is a legal term of land law about forbidden for foreigner holding land proprietor in Thailand. Foreigners are forbidden to holding the land properties in Thailand but there are ways to conserve their properties asset if foreigners wish to dwell in Thailand. Therefore, immigrant can only rent the house but not allow to buy house in Thailand. The condominium is the solution for immigrant to own the residential with limitation of holding under 49% of total unit of building. It can imply that more demanding in residential the expat worker will have more opportunity to become the owner of the asset as condominium.

*Minimum wage in Bangkok in 2018 = 325 THB/day					

1.3.1.4 The Mortgage for housing

Mortgage overview over the past 10 years has continued to expand with the expansion of the housing market demand. The credit of commercial Bank consists of credit for the entrepreneur (Pre-finance) and for personal loans (Post-finance) average growth of 11% over 10 years as shown in table 1.4. Even though, it was slightly drop after 2015 but it gradually growth.

Figure 1.6 The house-hold debt and real estate loan

Increasing house hold debt, the house hold debt is 66% of GDP at the end of 2011 and caught up at 80% in 2015 and remains stable until the end of 2017. The number of real estate loan to total loan in Thailand remain stable from 2011 to 2017 as shown in figure 1.6, it can imply that Thai people tend to have more debt which relevant with mortgage for housing growth rate as mention above. In summary, Thai people tend to have higher household debt which partly from buying property.

1.3.1.5 The government's public house policy was introduced in April 2016 and will end up in 2018.

Cabinet has approved the revised terms of “Ban Pracharat - Baan Thanarak Prachaat” to reduce the loan’s criteria for low credibility applicant (Post Finance) with limitation maximum property price at 1.5 million baht. As a result, the rejection rate of mortgage is expected to decrease. On other bright side, this policy will not only further stimulate the economy market segment which currently the sales volume is slower, but also accelerate unsold real estate volume which is around 33% of total.

1.3.2 Negative Factor

The consequence effects in late 2011, there was a major disaster by floods around Bangkok which is the main cause of the residential market industry is sluggish. Later between 2013 and 2015: The residential market along the BTS line has extremely expanded, because of accelerating investment in condominium projects in 2013 - 2014

and with this real shock in 2012 could push demanding of high-rise living for people, as a result higher sale for industrial developer between 2013 and 2014.

Subsequently, in 2015, the overall housing demand would be slow down again due to domestic political instability and a sluggish global economy. Reflection of this could see by the declining of condominiums registration rate in Thailand. After 2015, the growth rate of the number of condominiums registered dropped from 25% growth rate to 9%, due to the consumer's confidence for spending money.

The new taxation in term of land tax and building tax announce to use in 2019 may cause all developers and constructors to incur additional costs for projects under development by following this:

1.3.2.2 The new taxation in term of land and building tax

Announcement to use in 2019 may cause all developers and constructors to incur additional costs for projects under development by following this:

3	Commercial and Industrial	Ceiling tax rate 2.0%					
		Asset value	Tax rate	Annual tax burdens	Asset value	Tax rate	Annual tax burdens
		≤ 20 Mn. baht	0.3%	60 thousand baht	> 100-1000 Mn. baht	0.9%	0.9-9 Mn. baht
		> 20-50 Mn. baht	0.5%	100-250 thousand baht	> 1000-3000 Mn. baht	1.2%	12-36 Mn. baht
		> 50-100 Mn. baht	0.7%	350-700 thousand baht	> 3000 Mn. baht	1.5%	45 Mn. baht
4	Un-utilized land	Ceiling tax rate 5.0%					
		If a land remains un-utilization: tax rate will be increased 0.5% every 3 years					
		Year 1-3	2.0%	Year 10-12	3.5%	Year 19-21	5.0%
		Year 4-6	2.5%	Year 13-15	4.0%		
		Year 7-9	3.0%	Year 16-18	4.5%		

Figure 1.7 Annual tax burden under the new Land and Building Tax Act

Source: EIC analysis based on data from the Ministry of Finance

The tax calculation method has 3 stages

- In case of land without buildings.
- In case of land with building.
- In case of apartment room.

New taxation of land and building assessments will impact to property holders who have multi properties, have to pay a tax of 0.03% onwards. If the house costs more than 5 million or there are many houses, it will cause lot more tax payment.

Due to empty land which preparing for developing project have to pay tax also. It will affect to have higher cost not only developer in industry, but also in many sectors of economics will be impacted of having higher cost of tax.

Impact on investors who buy and rent the property as a commercial or have an empty land. The new regulation of land and building taxation will adds more tax value. Therefore, investors with multiple properties will result increase in tax payment.

The remaining backlog units of sales whether are housing project or condominium project, as this will result in higher project costs in each unit sold until the backlog will be sold out.

It is probably that the developer will charge more fee whether properties for sale or commercial. The higher price will lead to the lower chance to buy the properties product.

1.4 Industry Analysis

1.4.1 Expansion of the condominium market along the mass transit route

Since the sky train was built in 1999, and the subway was opened in 2004. From that day on, it is still concentrated in the heart of the city, today the metro lines begin to expand. This year, Bangkok will operate 5 lines of mass transit, 87 stations totaling 121.6 km. The current mass transit in Thailand may be called BTS and MRT. It is a route that creates a change in the area along both directions. There are various types of the emerging real estate, but in the past 5-6 years' condominium projects are mostly due to the fact that land prices are too high to develop other types of projects. At the end of 2016, there are currently 77,740 units of condominiums along the mass transit route, most of them are sold, with an average sales rate of around 88%. This is because of the many office buildings along the mass transit route and it is expected that in the year 2020 there may be more than 90,000 units. With the expansion of the

metro is a change of urban structure and also the real estate market. The location of the mass transit route is a golden location and the city center is the land of diamonds, but the price of land will rise enormously. They also change their way of life and the style of living in the city to become more “Vertical Living”.

In the year 2027, the last year of the mass transit network development plan in Bangkok. At that time, Bangkok will operate 11 lines of mass transit, 297 stations totaling 466.1 km. From the mass transit network development plan in Thailand lead to property and condominium market continues to grow in both unit size and price, with smaller space because of demand for many reasons such as; the demand of new houses, a second home near to the workplace and invest a legacy.

1.4.2 Property Developer Company in Thailand joint venture with foreign and more foreign customer in the market

According to Thai banks are stricter in leading to new projects lead to the property developers are looking for foreign partners. The real estate projects in Bangkok as a result of the joint venture, the number of projects increased from 4 projects in 2013 to 52 projects in 2017. Most joint ventures are joint venture projects with Japanese investors to develop condominium projects. Currently, there are also other investors from other countries, such as Singapore, Hong Kong and China. Although the joint venture will start from the condominium project but investment is expected to be condominiums and other income generating properties such as office buildings.

In the other hand, the proportion of foreign condominium buyers increases from last year. It is expected that foreign buyers will continue to purchase luxury residences in Thailand and below 10 million baht as a project developer that tries to market more international.

1.4.3 Investment of the Retirement Community project during 2018 - 2020

Thailand is transitioning from the elderly society to the complete old society. The demand for housing that is conducive to housing for the elderly. At present, there are developers of housing projects for the elderly, both public and private. In the residential segment for the elderly, developed by the private sector, there are two types of housing

projects. 1) General housing projects with caring elderly by function design 2) The Retirement Community Project.

The development of housing projects for the elderly from the private sector has continued to invest. Real estate developers should pay more attention to the development of housing projects combine with functions that are conducive to living for the elderly because it is a segment with a large market. In addition to the entrepreneur will target the target group is a family with the elderly and also expand the market to residential buyers who become an elder in the future as well.

Although the number of elderlies in Thailand is likely to increase but most of them still have low income and the savings are not very high lead to the housing market for the elderly is still limited. However, personal savings and the proportion of personal savings compared with personal cost of living of Thai population, it is likely to increase. As a result, the number of elderlies with middle-income earners will increase in the future and can reflect the opportunities for the long-term housing market for elderly.

Success factors in sustainable housing development for the elderly. It would be on other services and covers the entire life of the elderly, such as financial management, maintain the benefits and legal facilities. The entrepreneur must collaborate with partners who have expertise in various fields to create and build trust for the housing project for the elderly. This should be able to attract the elderly to trust and to buy housing in the end.

1.4.4 Prop Tech 'New Normal' 4.0 eras when the property comes integrated with technology

In the world of modern times, it is changing into a digital society, especially in the 4.0 eras where the tool is clever also can be raced and linked the data to each other. These are the big digital waves that affect the dynamics of the business sector. In the real estate business is the same, but it has to adjust to catch up with the development of Property Technology or short as 'Prop Tech'

In the 4.0 eras, “Digital Disruption” has transformed the real estate industry into “New Normal” or “new norms” for the real estate industry. To meet the needs of consumers in the era by bringing Technology to the property business called Prop Tech when consumer behavior changes to this new norm. It is necessary to have technology

for property business but everything that happens is still circulating in ecosystem itself, not torn into any new. But often the technology is happening to support the original work in each section to the potential or strengthen the quality.

Prop Tech is a new business opportunity of entrepreneurs, if we are looking at Prop Tech's investment corner is finding new business opportunities but in terms of strategy, the key goal of looking for startups related to real estate. It is to find technology developers who are involved in the business whether it is construction technology, Home management online buying and selling systems or even residential technology. To meet the core business of real estate development companies that is the development of project for both sale and rent there.

1.5 Competition Analysis

1.5.1 Ananda Development the first Tech Company in Thailand

Ananda Development restricting the decision to Tech Company, the first in Thailand, which is a revolution in the real estate industry. And there are also announcements the important strategic which will bring innovation and technology to develop and raise standards in driving organizations and projects to be more effective also to keep pace with the changing market and consumers for the lifestyle of the city is modern and better quality.

This unexpected turn of decision makes Ananda the first real estate company to announce itself as a Tech Company, but remains a core business real estate with a focus on technology partnerships to create an ecosystem, it is important to help their business survive and grow in the future. We can tell this is better than before also looking forward to develop the new tech in the same time.

1.5.2 Ananda Development the market leader in condo along the mass transit

Ananda Development has outstanding in the development of residential land adjacent to the mass transit than other developers. From the succession in the past, it shows that the demands for housing near to mass transit still very high. In addition, the company

has been able to implement the plan as it has entered into a joint venture agreement with Mitsui Fudan Co., Ltd. of Japan to develop a condominium project adjacent to the mass transit in Thailand. As a result, the company has gained the confidence of its customers and strengthened its leadership in the development of condominiums adjacent to the mass transit to meet the life of the city.

1.5.3 Ananda Development is the number one joint venture in market

Since Ananda Development joint venture with Mitsui Fudosan, Japan's largest real estate developer in 2013. As a result of joint venture, the growth in residential property values has grown annually from 6,800 million baht in 2013 to 26,000 million baht in 2014, representing 282%, and growing by 75% in 2015 from 2014. Business continuity in 2016 is projected to increase by 53% from 2015, and by 2017, the value of the venture will be 95,000 million baht, up 36% from 2016. According to growth can be concluded that Ananda Development is the number one of joint venture company strategy in Thailand by the result of 5 years the value is 95,000 million baht and 21 projects in hands.

Figure 1.8 Number of Ananda's project value

Source: ANAN

1.5.4 Ananda Development is the number one of international sales

From the growth of the real estate market due to the expansion of foreign customers investing in residential properties in Thailand. According to statistics from 2015-2017, Ananda Development has grown 164% overseas in 2017 if compare with the year 2016 and the figure stood at 9,775 million baht. Most of the foreign customers are coming from 38 countries, but the segment has resulted in the highest growth in sales from 10 countries: USA, UK, Canada, Australia, China, Japan, Hong Kong, Singapore, Malaysia and Taiwan accounted for 93% of all foreign customers.

Figure 1.9 International sale growth and main countries of foreign customer

Source: ANAN

1.5.5 Ananda Development gains about 3% market shares in the industry of listed companies and grow up in market shares about 1% in top 10 residential development companies in Thailand.

According to the market's data of statistics (statistics of the market's data) recorded by SET in Thailand in 2016-2017, Ananda Development get about 3% market shares from sales report of the company show 11,340 million baht if compare with the total of industry sales in 2016 about 403,571 million baht and in the year of 2017 still get 3% market shares in the industry it means that the performance of Ananda Development still stables performed. If we focus on top 10 companies about residential development which almost popular choice of customer such as LH, PSH, SPALI, QH, SIRI, AP, LPN, ANAN, GOLD and SC, Ananda development got about 5% market shares in 2016. Ananda's keep on performance and can (able to) make more customer reliance as a result of market shares growth up about 1% from 5% to 6% in 2017 if compare with top 10 of residential developer in Thailand.

Figure 1.10 Comparing market shares of property development industry

Figure 1.11 Comparing market shares of top 10 of residential developer in Thailand

1.6 Investment Summary

Comparing between two methods, Discount Cash Flow Valuation and Relative Valuation. We choose to recommend the Relative Valuation method to analysis the valuation of ANAN. To summarize that have 3 results of 3 methods form as calculation below we have target by P/E trailing method which be equal to 6.01 THB, P/E forward method is 5.69 THB and by P/BV which to be equal to 4.81 THB and overlook EV/EBITDA method because when looked back in history stock price and performance, it is difficult to reach that target price of stock at 15.43 THB. To derive ANAN's target price, we choose P/E Trailing to be equal to 6.01 THB.

Table 1.4 Investment Summary

P/E (Trailing)	6.01	6.01
P/E (Forward)	5.69	
P/BV	4.81	

Therefore, with arrived a fair price of ANAN's share at 6.01 THB per share compare with current price of 3.98 THB per share as of 5 December 2018. It is clearly to see that we issue the investor should BUY the share.

1.7 Relative Valuation

The relative valuation for real estate industry has distinguished industry behavior which it has relatively low Price to earnings per share (P/E). Due to business trend to have stable growth on sale and business model is developing land and sold out the project, if developer will not invest further on other project, the earning will drop in following year. Therefore, there is risk on nature of industry, so the stock price is set at low price per share. Vice versa, the more selling project, the more can generate earnings in each year as well. The 4 valuation methods that use to calculate in the relative valuation are Price to earnings per share (P/E), Enterprise value to ENITDA (EV/EBITDA) and Price to book value (P/BV). By using these as mention multiples

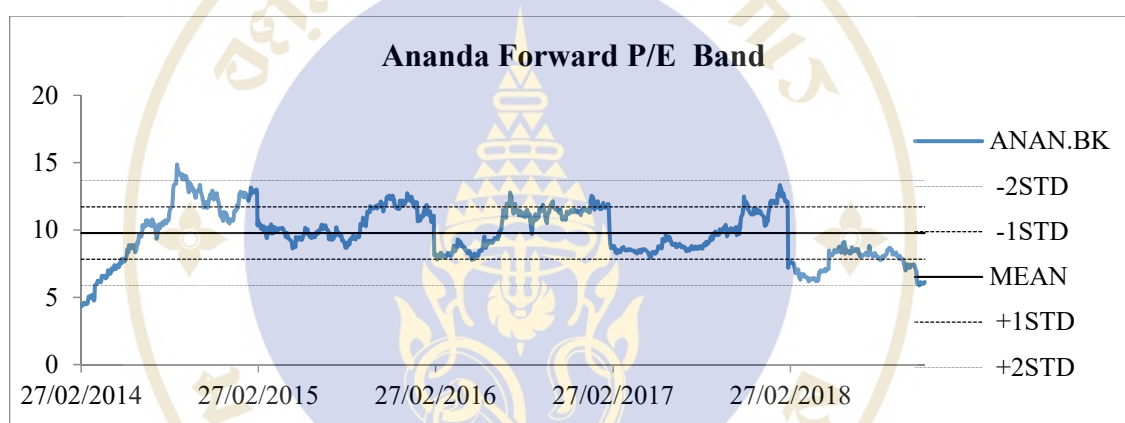

Figure 1.12 Ananda forward P/E band

Figure 1.13 Ananda historical P/E band

Source: Thomson Reuters

To begin with selection of the peer competitors in real estate industry with similarly product as core product is condominium and non-core product is housing. Then collect the raw data of individual company in peer group from Thomson Reuter.

Preliminary step of calculation, eliminate the out-liner firm which has divergent number from selected firm list which based on Ananda development PCL. data such as Lalin Property PCL. which has very low market capital and Land and Houses PCL which has very high market capital.

Second step, due to there is 4 main criteria

- Market capital
- Trailing P/E
- Trailing P/BV
- Trailing EV/EBITDA

Table 1.5 Peer analysis financial ratio

9	GOLD.BK	Golden Land Property Dev	20,307.75	8.75	10.99	8.90	1.26	
11	ORI.BK	Origin Property PCL	19,691.00	8.05	7.40	7.44	2.94	2.22
		STD	4,224.56	2.78	7.62	16.26	0.72	0.56
		Min, -1 STD	9,024.60	1.20	16.56	4.64	0.17	0.40
		Max, +1 STD	17,473.71	6.76	31.80	37.17	1.62	1.52

By taking standard deviation to average the amount of variation of data set and finding the appropriate range based on Ananda data set. As a result, for those limit range of market capital is between 9,000 million THB and 17,500 million THB and for limit range of trailing P/E is between 2.73 times and 8.95 times, except Origin property PCL which has a slightly higher market capital than limit range but for trailing P/E aspect is in range. The company out of those range would be eliminated. After that, take average and median P/E of peer group and multiply by Ananda's EPS which consist of forecasted of quarter4 in 2018 and forecasted total year of 2019 and get EPS 2018 and 2019 is equal to 0.72 and 0.90 in respectively.

1.7.1 P/E Method

In calculation, take the EPS multiply with median P/E of peer group instead of using average P/E. Because, there is several amount that enhance the P/E average value. From the estimation that imply the target share price should be 6.01 THB with P/E trailing method and 5.69 THB with P/E forward method.

1.7.2 EV/EBITDA Method

The second method, estimate by using EV/EBITDA. After chosen the peer group as above mention, to take median of forward EV/EBITDA of peer group from Reuter and multiply with estimated EBITDA in 2019 which to be equal to 4,198,991,970.53 THB and already take out value of debt. Then, divide by the number of share. Estimation of EBITDA use historical data total percentage of sale in 2017 depend on project to be equal sale rate in following year until total unit sold out. As a result, have the target price to be equal to 15.43 THB.

1.7.3 P/BV Method

The last method, estimate by using P/BV. First step, take median of trailing P/BV of peer group from Reuter instead of using forward P/BV which has a result to be equal to 0.89 times. Next step, multiply the trailing P/BV of peer group with book value in 2018 which be equal to 17,907,598,580 THB and divide by the number of share. As a result, the target price by using P/BV should be 4.81 THB per share.

Table 1.6 Expected price by relative valuation method

P/E	FWD	5.69
	TRL	6.01
EV/EBITDA	FWD	17.46
P/BV	TRL	4.81

Source: Calculation

1.8 Relative Valuation Assumption

1.8.1 Revenue from project sale and management and service

Ananda Development's main business is to develop real estate for sale and recognize revenue. The key criteria for predicting the company's performance are sales milestone report and the transfer of ownership from the fourth quarter of 2014 to the third quarter of 2018; details the quarterly information on the presentation of the company website.

According to the data was analyzed to recognize the revenue of each quarter to accumulate into the income from the sale of real estate annually, it consists of low-rise and high-rise projects. Each project details the start date of the project until the end of the project, or if the project has not ended it will show the transfer of ownership at that time compare with 100%

Estimation of revenue each year, from the percentage of transfer of ownership represents the value of project value of each project and to bring it into the revenue recognition of that year in 2018. From the data, we know the data up to quarter 3 so the estimate of the fourth quarter in 2018 by the low-rise projects are projected to grow from the third quarter by assumption that plus the different of percent sold in quarter 3 and 4 from last year and the high-rise project, which is the main income of the company, we estimate by expect more transfer ownership from quarter 3 to quarter 4 of last year. Then calculate the value from project value and deducted from the transfer value of the previous year. This is recognition of the income of each project in that year.

In the secondary income from project management and service, the growing of percentage is not fixed from previous year so the estimation we compared to the

total revenue of each year and the ratio is only 10%, so we expect revenue recognition on the secondary income equivalent to 2017, and the projection is the same every year until 2021.

Table 1.7 Forecasted financial statement

(million Baht)

Revenue	2017	2018F	2019F	2020F	2021F
Revenue from project sales	8,932	6,762	5,696	6,831	4,124
Revenue from project management and service	3,470	3,470	3,470	3,470	3,470
Total Revenue	12,402	10,232	9,166	10,301	7,594

1.8.2 Cost of project sales and cost of rent and service

In term of costs, if look at the past 5 years, it is proportional to the revenue of each category, so we calculate from historical data from cost of project sales compare with the revenue from project sales; the main income of the company and cost of rent and service compare with the revenue from project management and service; secondary recognition activities. From the past, if calculate by average in percentage the cost of project sale accounted for 64.5% of revenue from project sales and average in percentage the cost of project management and service accounted for 54.6% of the revenue from project management and service, so we estimate that each year is a percentage of the projection for the next five years.

Table 1.8 Total COGs forecasting

(million Baht)

COGS	2017	2018F	2019F	2020F	2021F
Cost of project sales	6,060	4,362	3,674	4,407	2,660
Cost of rent and service	1,986	1,893	1,893	1,893	1,893
Total COGS	8,046	6,256	5,568	6,300	4,553

Source: Calculation

1.8.3 Selling expense and Administrative expense

In term of selling expense and administrative expense we estimate the SG&A by look at the past 5 years; it is proportional to the total revenue of each year, for the result we calculate by average in percentage of the past 5 years so SG&A accounted for 21.1% of total revenue so we estimate that each year is a percentage of the projection for the next five years.

1.8.4 Share of gain/loss from investment in JV

For the share of gain/loss from investment in JV, we estimate by look at the data of estimation of revenue each year, from the percentage of transfer of ownership represents the value of project value of each project and to bring it into the revenue recognition of that year in 2018. From the data, we know the data up to quarter 3 so the estimate of the fourth quarter we estimate by expect more transfer ownership from quarter 3 to quarter 4 of last year. Then calculate the value from project value and deducted from the transfer value of the previous year. This is recognition of the income of each project in that year. According to ANAN have 51% of 100% in JV and after we estimate the number of revenue of the next 4 years we multiple into 51% to get the value of revenue own by ANAN in JV and we calculate the share of gain/loss from investment in JV by multiple by net profit margin of each year.

Table 1.9 EBIT forecasting

(million Baht)

COGS	2017	2018F	2019F	2020F	2021F
Total Revenue	12,402	10,232	9,166	10,301	7,594
Total COGS	8,046	6,256	5,568	6,300	4,553
Gross profit	4,356	3,977	3,598	4,001	3,040
SG&A expenses	2,576	2,156	1,931	2,171	1,600

Share of gain/loss from investment JV	-341	1,186	2,055	1,370	633
EBIT	1,987	3,410	4,107	3,605	2,430

Source: Calculation

1.8.5 Depreciation

In term of Depreciation, we look at the data of PPE from the details in notes of financial statement of the past 5 years. The detail of PPE we divided into two parts Land and land improvement and Other PPE so we calculated by input the value of gross book at 1 January of each year also additions and disposals or writes-off between that years and we get the gross book of PPE at 31 December of each year (the value of Gross book at 31 Dec of the last year is the value of gross book at 1 Jan of the next year). So after we calculate from the data we assume that the estimate of the next 4 year of depreciation equal to the last year of 2017.

1.8.6 Capital Expenditure

In term of capital expenditure, we calculate from the value of beginning property development for sale in each year plus with CAPEX for the year and deducted by cost of project sales of each year to get the ending property development for sale of the year. We know the date of the past 5 years of beginning property development for sale and cost of project sales also ending property development for sale in the year from the beginning of the previous year so we can calculate CAPEX for the year of each year. After we get the value of capital expenditure of each year we calculate the change in CAPEX for the year to get the value for calculate in DCF.

1.8.7 Net Operating Working Capital

In term of net operating working capital, we calculated by sum of the total value of Trade Account Receivable and Inventory and deducted by Trade Account Payable. For the value of Trade Account Receivable, we calculated by divided estimate revenue of the year by 365 days and multiple by average account receivable turnover ratio of ANAN from the past 5 years as 11.45. For the value Inventory, we calculated by divided estimate costs of the year by 365 days and multiple by average inventories turnover of ANAN from the past 5 years as 0.33. For the value of Trade Account Payable, we calculated by divided estimate purchase of the year by 365 days and multiple by average account payable turnover of ANAN from the past 5 years as 54.56. According to the calculated above, we got the net operating working capital of each year in the next 4 years of estimation.

Table 1.10 The Discount Cash Flow to Firm

YEAR	2018F	2019F	2020F	2021F

1.9 Sensitivity Analysis

We performed a sensitivity analysis for ANAN by look at the key variables are earning per share and P/E ratio.

Table 1.11 Sensitivity Analysis: EPS and Median P/E

		Median P/E							
		-30%	-20%	-10%	0%	10%	20%	30%	
		6.01	5.85	6.68	7.52	8.35	9.19	10.02	10.86
EPS	-30%	0.50	2.95	3.37	3.79	4.21	4.63	5.05	5.47
	-20%	0.58	3.37	3.85	4.33	4.81	5.29	5.77	6.26
	-10%	0.65	3.79	4.33	4.87	5.41	5.95	6.50	7.04
	0%	0.72	4.21	4.81	5.41	6.01	6.62	7.22	7.82
	10%	0.79	4.63	5.29	5.95	6.62	7.28	7.94	8.60
	20%	0.86	5.05	5.77	6.50	7.22	7.94	8.66	9.38
	30%	0.94	5.47	6.26	7.04	7.82	8.60	9.38	10.16

In term of earning per share and median P/E, it has a little impact on share value. Only one of two factors decrease to 30% from the estimate can change BUY

recommendation to HOLD recommendation. According to sensitivity analysis of both of factors decrease up to 20% from estimation can change the recommendation to SELL.

1.10 Financial Analysis

In term of financial analysis, we divide into two parts: the historical statements of comprehensive income and the financial ratios. We provide the analysis by comparing information with ANAN's competitor, ORI. The analysis of historical statements of comprehensive income consisted of common size analysis, trend analysis, growth analysis and also financial ratios. See more detail in appendix.

1.11 Investment Risk and Downside Possibilities

The negative factors that may be risk to Ananda performance's as the following:

1.11.1 Fierce market in real estate industry

The increasing in household debt rate and political instability lead to restriction of loan from financial institution and limitation of financial transferring policy in China will affect in real estate industry overall to has higher competition. All developers stimulate the sale by offering heavy marketing campaign.

With the reputation of the company, the developer of real estate projects located near Bangkok Mass Transit System in city center area is able to target the demand of consumers who need convenient living place and short travel time, the Ananda's projects are always in demanding in market. From risk factors may impact sales, the Company often reviews the development plan to be proper with the economic situation, including marketing strategies, marketing promotional activities and planning the operational work in various aspect. By doing this, it can maintain a competitive advantage and manage sales to achieve the target.

1.11.2 The scarcity of empty land in metropolis

From the fierce market in real estate industry cause higher competition in the land acquiring's of any business, especially the area in the center of Bangkok. In addition, the company has a policy of non-holding land before the investment, which may be costly, may affect the risk of land acquisition which is not in accordance with the future business plan and the increasing land prices risk. To reduce this risk factor, Ananda has a long-term plan with land agency partner in order to limit risk of unexpected land procurement in potential place with optimized costs.

The risk of land acquisition that cannot be developed the project due to legal constraints. The Company has policy to reduced risk by providing a knowledgeable and experienced staff to inspect all area of acquiring land before execution of the land purchasing and has coordinating agencies in order to obtain the certification with government agencies and hiring an independent appraiser in the land appraisal. In addition, the process of purchasing and procurement of land will be committed through the board of directors' committee which composed top executives who are specializing in land acquiring and land development, in business development, in financial department, in law department and specialist in government requirements and regulation, to ensure that company can acquire potential land with optimum price and follow the execution project development plan.

1.11.3 Risks from the changing of regulations and laws which relating to real estate business.

To reduce the risk of reforming law and regulation by government. Ananda has established a committee to oversee and comply with applicable laws and regulations which relating with developing current projects and future project.

For the development of condominium projects, the Environmental Impact Assessment Report (Environmental Impact Assessment or EIA) for approval EIA from Ministry of Natural Resources and Environment. At present, the approval is under authorization of environmental impact analysis agencies committee to consider the environmental impact assessment report. And there are no standard requirements for environmental impact mitigation. Therefore, the company is risky if its projects would

reject by the committee of Environmental Impact Analysis or has been delayed over the time frame.

To propose the report, Ananda hired an advisory company who registered with the Ministry of Natural Resources and the Environment in charge to prepare accordance the Environmental Impact Assessment Report and relating law and regulation and Ananda has complied with the conditions in the EIA report in all respects.

1.11.4 Risk from higher cost of construction.

The construction cost which mainly consist of material costs and labor costs. If price of main material increase or change labor cost. These will unavoidably impact on production costs.

To prevent and reduce the risk level of volatility construction cost. Ananda has a relationship with its business alliance and believes that strong business partnerships will mitigate the risk of price adjustment. So, the company ensures under alliance collaboration can deliver quality products and services at standard prices for their construction costs control. In term of labor cost increasing, Ananda has concessionaire for project development which can mitigate risk of labor cost adjustment for under construction project.

1.11.5 Risk of contractor shortages and skilled workers shortage

Shortage of contractors and labor issue are still a major problem with real estate industry. Currently, the Ananda has many project during construction and there are also government' mega-project about public infrastructure which may cause of shortages and skilled workers shortage. If the company cannot procure with a specialized contractor to operate in the Ananda's projects, it may delay the construction development project or work quality doesn't reach defined requirement of Ananda's standard.

The company reduced the risk by modifying some construction methods from the original construction (conventional construction) into precast concrete construction which create more efficiency in construction, to be faster and reducing labor demanding.

1.11.6 Risk of inventory

In developing project, the number of units is determined to meet the demand of the consumer which based on sales and marketing data to closely observe market trends and Ananda's capacity. In condition of fluctuated economic and the more stringent credit approval from financial institutions, it may impact sales growth which get along with estimation. As a consequence, there may be a number of completed unsold units for a while

As a policy to limit risk of unsold unit by managing the inventory more efficiently, the low-rise such single house projects and townhome project will be developed by separated in phases to enhance the construction management more effective. If sales are not according to estimates, the company can adjust the construction schedule in a timely manner or if the consumer behavior has significantly changes, company will be able to adapt its model to meet consumer lifestyle. For condominium projects, Ananda has reduced risk of having units left over by focusing on in-depth research to develop the style of condominium projects and meet the demand of the main target customers. In additional, department of marketing & sale usually stimulate the purchasing decision of the customer by launching promotion activities and campaign that appropriate with the needs of customers at that time as well.

1.10.6 Risk of Ananda's financing and approval restriction policy from financial institution.

Financial institutions are strict in credit approval for entrepreneurs for Pre-Finance (Business) and Post-Finance (Consumer Loans).

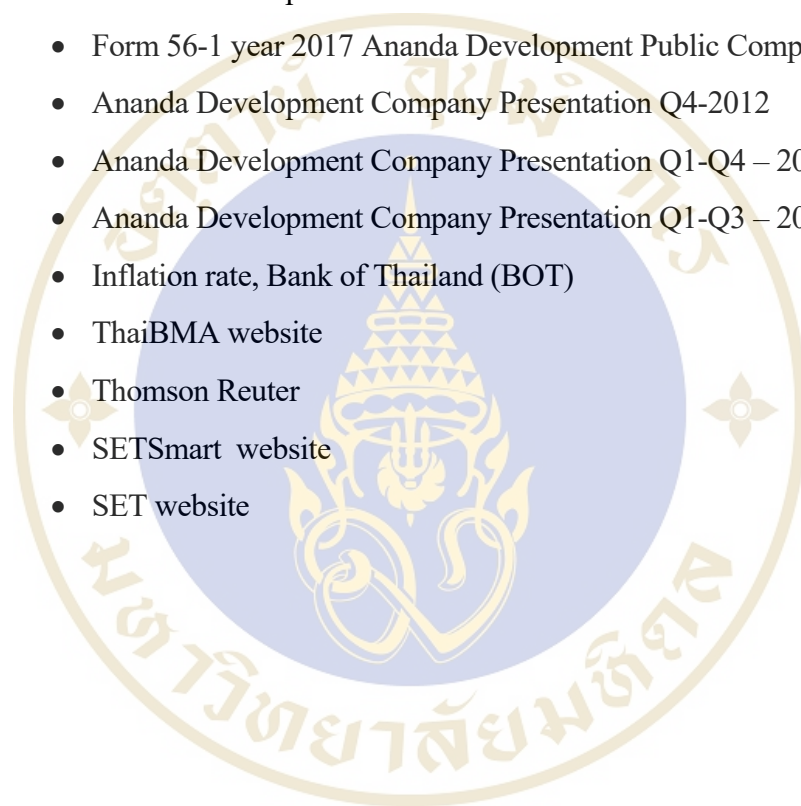

For pre-finance of Ananda, the company has policy of financial discipline by managing debt to equity ratio under 2:1 time and manage the financial capital effectively and allocate the appropriate financial cost. Moreover, Ananda plan the future budgeting and have credit loan plan for further investment in project.

However, post-finance as most of Ananda consumer also need financial support from financial institutions. The qualification of creditability is considered intensively and rejection rate of credit approval slightly growth which is concerning point for Ananda, as well. Therefore, Ananda offer the risk management program to prepare the proposal process for customers applying for a loan from a financial institution at least 6 months

in advance. This program can facilitate customers in applying for a commercial bank loan and encourage customers to get a quick loan. If customer proposal will be rejected, Ananda will resale the reserved room to other customer which can reduce the unit leftover effectively.

Figure 2.7 ANAN Corporate Governance

As of 2017, ANAN received Excellent scoring with the top quartile for large-scale market capitalization.

2.7 Five Forces Analysis

2.7.1 Threat of New Entrants: low

Economy of scale, the production of high demand standard products, it can reduce the fixed cost per unit, resulting in lower production costs. Ananda has high unit to construct in each project and there are many project in a year. Moreover, Ananda has construction innovation as “Ananda UrbanTech” which is artificial intelligence (AI) to improve the efficiency of project management and data transfer. This ultimately leads to reduce in construction time and costs.

With this new innovation of the company, Ananda can achieve the success by

Reduce design cycle time by 47% using construction management tools.

Reduce construction time by 5-10% and reduce construction costs by 5-10% using the scheduling tool.

Save the time up to 7,800 minutes and another 4 million baht using monitoring tools.

Product differentiates, with the concept of the condominium along the mass transit route and design innovations are the product differentiation to compete with competitors. Ananda has announced to be innovative company by focusing on Gen C as customer target group who is not grouped by age, but grouping based on internet usage, and social networks. It has addictive behavior of connection and sharing at all times (Digital Lifestyle) and have fast and hassle life style. With target group will be interested for customer.

Capital requirement, the nature of real estate industry will be requiring very high capital investment for each project, mainly in construction cost. In additional, the new comer might have higher advertising budgeting to be recognized for customer, rather than existing developer.

2.7.2 Threat of Substitutes: low

Ananda also offer substitution product of condominium as housing, as well. But, housing mostly located outside Bangkok. The customer who interest to buy condominium has reason of time spending on transportation.

2.7.3 Bargaining Power of Customers: medium

The more developers in industry, the higher bargaining power will transfer to customer. On the other hand, product differentiation as location and innovative design will reduce the bargaining power of customer.

2.7.4 Bargaining Power of Suppliers: low

There are many direct competitor and indirect competitor who need the same similar material products as Ananda's need. However, to prevent and reduce the risk level of volatility construction cost. Ananda has a relationship with its business alliance and believes that strong business partnerships will mitigate the risk of price adjustment. So, the company ensures under alliance collaboration can deliver quality products and services at standard prices for their construction costs control.

In term of construction concessionaire, Ananda has subsidiary construction company named Helix which has supplied Ananda's project around 30% of total project on hand to reduce risk and bargaining power of supplier.

Labor force, Ananda has considered in this factor by implement innovation named Ananda UrbanTech to reduce requirement amount of labors need in construction.

2.7.5 Competition in the industry: high

Barriers of exit will force many developers to continue run on this business.

The industry growth rate will affect to fierce completion and the land price will grow faster which make the lower margin of any developer.
